WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two, a mirror pair (the left arm is drawn). 10 mm steel plate:
three hole centres in one plane, ends rounded to 18 mm radius,
36 mm wide between them.
Pivot hole 20 mm at the back end.
Axle hole 20 mm, 110 mm ahead of the pivot and 45 mm lower.
Check it against the hub motor's shaft and flats.
Front end centre 195 mm ahead of the pivot and 95 mm lower.
Spring tab: 10 mm plate 44 x 44, welded square to the arm's outer
face at the front end, its top face 90 mm below the pivot centre
and centred on the front end. The spring sits on it.
Fit: the pivot pin passes the back hole; the motor shaft passes the
axle hole with a 5 mm spacer between wheel and arm and a nut outside.
Check: the two arms laid back to back have their holes in line.

PALLETPILLOT
