WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

8 mm flat bar 20 mm wide, ends rounded to 10 mm radius.

Two 10 mm holes 228.7 mm apart between centres:

exactly the distance from the cam shaft centre to the lever pivot,
so the crank and the lever's up-arm stay parallel as they turn.

Fit: outboard of the crank and the lever, on their 10 mm pins, with
a washer and split pin at each end.

Check: measure the cam shaft to lever pivot distance on the built
subframe and match the link to it within 0.5 mm.
