WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Main bar: 20 x 10 mm flat bar, 410 mm long. 12 mm pivot hole 10 mm from the back end.

Up-arm: 20 x 10 mm bar, ends rounded, welded at the pivot end standing square to the main bar; 10 mm hole 50 mm above the pivot hole.

Grip: 28 mm tube 30 mm long, welded across the front end so it stands out to the left, away from the enclosure.

Fit: on the bracket's pivot pin with an 11 mm spacer between the lever and the bracket. Wheels down: the lever lies forward, resting on the stop tab. Wheels up: the lever stands straight up.

The link joins the up-arm to the crank pin.

Check: the lever swings a quarter turn without touching anything.

PALLETPILOT
