WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Foot and upright: 4 mm steel strip 40 wide, bent to an L: foot 20 long, upright 44 tall to the shelf.

Shelf: 6 mm plate 60 x 50, welded to the top of the upright, reaching forward. Drill it for the lidar's own mounting holes.

Foot: two 5.5 mm holes; it is screwed M5 into rivet nuts in the top of the hoop's front bar, on the centre line.

Fit: the lidar's scan plane must be 200 mm above the floor, and the lidar's front 10 mm behind the safety edge face.

Check: shelf level within 1 degree side to side and front to back.
